

‘Letter of Challenge’ To Our Canadian Government

- We the people challenge our government leaders to become pioneers with our current and future economic, energy and pollution choices. We urge our governments to protect us from pollution/Climate Change by enacting this **‘The Responsible Clean Energy Act’**.
 - To reduce greenhouse gas emissions to **40%** below the 1990 baseline levels and to create **40%** of our energy from green-renewable sources, such as ‘wind’ and ‘solar’ by **2025**.
 - We further urge this reduction of greenhouse gases to reach **100%** and to create **100%** of our energy from green-renewable sources, again compared to the 1990 baseline levels by **2050**.
 - This Act ensures that in addition to protecting our environment and living standards, we will begin a process of properly investing into the largest energy infrastructure this world has seen or will ever see.
 - **Creating at least 3 million new green jobs for Canadians**; jobs for ourselves today, for our children tomorrow and for all future generations to come.
 - This Act ensures that when the world runs out of the one physical resource it uses to create over 50% of all **energy** we use to live the fortunate way that we do - **OIL** - that we will already have created enough new unlimited green energy to replace oil once it is all gone in the next 14-21 years.
 - This challenge is both necessary and attainable and I hereby enthusiastically endorse this proposal.
-
